Multi-parameter System

MULTILINE 1000

- Multi-parameter system for measurement of pH/ORP, D.O. conductivity, turbidity, free and total chlorine
- Intuitive menu navigation
- Excellent cost/performance ratio
- No chemical consumables needed

Constant flow: flow measurement

The flow measurement is used to control the optimal incident flow for continuous operation.

Everything at a glance: MULTILINE 1000

With up to 6 individually configurable measuring channels, the MULTILINE 1000 terminal is a very flexible measuring system for drinking water analysis.

The system is pre-assembled on a wall mounting panel for immediate use. Just connect the power and sample flow - and it's ready to go.

- Digital interface (RS 232/RS 422/RS 485)
- 4 x 0/4 ... 20mA outputs
- 4 x potential-free relays for limit value/alarm function (timer function programmable)
- Metal housing, protection class IP 65
- Large backlit display with touch screen

Pre-mounted

The MULTILINE 1000 is the only complete system to offer convenient measuring and display of up to six parameters with one single terminal. It is very easy to operate thanks to a touchscreen and a intuitive menu. The monitoring system comes pre-mounted on a panel and is ready to use.

Correctly dosed: chlorine measurements

Cl₂

For disinfection monitoring, three amperometric type chlorine electrodes are available.

- **Free chlorine:** The FCML 412 N is suitable for measurements with changing pH values (pH 4 ... 9, pH compensation integrated in the sensor)
- **Free chlorine:** The FCML 68 is suitable for measurements with a relatively constant pH value of approximately pH 7*).
- For **total chlorine**, the TCML N is available.

All measuring cells are supplied with the D-Cl flow-through armature.

*) If the pH value is measured simultaneously, the measured value can be pH-compensated via the MULTILINE 1000.

pH

Cond

ORP

High precision measurement: pH, Cond, ORP

The flow-through armature has three slots for 13.5 screw threads.

Integrated in the screw coupling, all three built-in sensors can be removed together and thus be rapidly and easily calibrated or serviced with the aid of the calibration console.

- **SenTix® ML 70 combination electrode**
pH combination electrode optimized for drinking water, with gel electrolyte and S7 plug connector
- **LR ML conductivity cell**
Very robust synthetic two electrode cell with a large measuring range of 0.1 to 20 mS
- **SenTix® ML ORP combination electrode**
ORP combination electrode for exact ORP measurement

Turbidity Measurement

- Simple calibration
- Integrated bubble trap
- Ultrasonic cleaning of cuvette

The nephelometric measurement is offered with or without ultrasonic cleaning of the flow-through cuvette.

The user can also select between infrared light measurement according to DIN 7027 and white light measurement according to US EPA 180.1.
